## TILES LAYING INSTRUCTION

### Wall requirement

The wall should be strong and flat, surface should be smooth, the wall should be waxed/primed. Wall should be clean and dry, if the tiling has to be done on plywood the surface of wall should be sealed with 50% volume mixture of PVA and water.

### Tiles Preparation

Mix the tiles from different cartoons which will help in finding blending of shades.

### Tiles laying

Firstly, apply the high quality ceramic adhesive on the wall and place the first tile on the corner. Apply even pressure on the four corners of the tile to ensure sticking. Fill the area of wall that can be filled with the tiles without cutting and leave it for at least 12 hours. Then fill the rest of the area with the measured and cut tiles.

### Tamping Process

To ensure the proper contact of tiles with the wall, evenly tamp the tiles with a rubber mallet.

### Applying Grout

On the next day, the grouting is done. Apply the grout diagonally between the tiles using a sponge to fill the gaps between the tiles. Clean and wipe the surplus grout with a sponge.

### Curve Cutting

To fit the tiles in a curved surface of a washbasin etc., measure and mark the curve on cardboard and place the cardboard on the tile to cut it.

### Hole Cutting

To pass a pipe through the tile, the tile has to be cut in a specific manner. Mark the position on the tile where the pipe will occupy. Draw a straight line passing through the center of the tile. Cut the tile along the drawn line. Cut the semi-circle on each of the two halves and when these two halves are placed together will form a hole.

### Window Recess Tiling and Cutting

Tile has to be cut in an "L" shape for window recess. Cut a line from center to edge and then draw a right-angle line vertically down. Cut the line to get an "L" shape that can fit in a window.

### Accessory Tile Fitting

While laying the normal tiles, keep an empty space where accessory tiles will be fitted. Apply the adhesive on

## UTILITY OF WALL TILES

Multiplex

Industry

Hotel
